

DAC BEACHCROFT STRATEGIC ADVISORY TRANSPORTATION TECH

Vehicles are more advanced than they ever have been, and technological innovations continue to appear with amazing speed. If insurers want to stay competitive in this new environment, they need to update their products and business models.

We can help.

NEAR FUTURE EXPECTATIONS

- The Automated Vehicles Act 2024 is now law, but the government will need to engage in a series of public consultations before drafting the many regulations that will be required for successful implementation. We have extensive experience with responding to consultations on these issues and can assist you so that you have a say in how the law is developed.
- ADAS technology, unlike automated vehicle technology, is readily available now and is altering the insurance landscape: repairs, data issues, driver behaviour and risk management are all changing. We can advise on all aspects and how to improve/update your products, making you more competitive in a challenging market.
- EVs are changing insurers' products. Many motor policies now cover claims arising from battery cables and charging points, sometimes even wiring inside a house. There are also issues arising from new repair and storage costs and risks. We have helped clients improve their policy wordings, and we can do the same for you, making you ready for what's to come.
